**Facilitator Training for INTERPROFESSIONAL PROBLEM-BASED LEARNING (iPBL)**

**SEPTEMBER 29, 2016**

8:30AM - 4:00 PM

**VENUE**

ACADEMIC HEALTH SCIENCES LEARNING CENTRE AT THE REGINA GENERAL HOSPITAL

**Description:**

Inter-professional Problem Based Learning (iPBL) is both a method and a philosophy. It is an educational process where learning is centred on problems as opposed to discrete subject-related courses. Learning results from the process of working towards the understanding or resolution of a problem. At the University of Saskatchewan Health Sciences Programs, iPBL modules are organized for students each year. This is a required workshop for anyone who wants to facilitate one of these modules. The workshop is also open to individuals interested in learning about iPBL, but not planning to facilitate modules.

**Objectives:**

At the end of the workshop, you will be able to:

- Define iPBL and explain what distinguishes it from other types of teaching and learning
- Describe the steps involved in approaching a PBL session
- Identify some challenges facing PBL tutors and some strategies to deal with these
- Observe a PBL session.

**To register please go to:**
