RE: Publish or Perish

---

Are you applying for tenure, promotion or a new job? Is your work cited in journals which are not ISI listed? Publish or Perish is designed to help individual academics to present their case for research impact to its best advantage.

Publish or Perish is a software program that retrieves and analyzes academic citations. It uses Google Scholar and (since release 4.1) Microsoft Academic Search to obtain the raw citations, then analyzes these and presents the following metrics:

- Total number of papers and total number of citations
- Average citations per paper, citations per author, papers per author, and citations per year
- Hirsch's h-index and related parameters
- Egghe's g-index
- The contemporary h-index
- Three variations of individual h-indices
- The average annual increase in the individual h-index
- The age-weighted citation rate
- An analysis of the number of authors per paper.

The results are available on-screen and can also be copied to the Windows clipboard (for pasting into other applications) or saved to a variety of output formats (for future reference or further analysis). Publish or Perish includes a detailed help file with search tips and additional information about the citation metrics.

For more information on this free software including how to download and install Publish or Perish please see the link below:
